

# Scan Report

May 26, 2026

## Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “no\_name”. The scan started at Tue May 26 14:23:16 2026 UTC and ended at Tue May 26 14:29:34 2026 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

## 1 Result Overview

| Host                          | Critical | High | Medium | Low | Log | False P. |
|-------------------------------|----------|------|--------|-----|-----|----------|
| <a href="#">192.168.238.7</a> | 0        | 0    | 0      | 2   | 0   | 0        |
| Total: 1                      | 0        | 0    | 0      | 2   | 0   | 0        |

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 2 results selected by the filtering described above. Before filtering there were 48 results.

## 2 Results per Host

### 2.1 192.168.238.7

Host scan start Tue May 26 14:24:00 2026 UTC

Host scan end Tue May 26 14:29:29 2026 UTC

| Service (Port)               | Threat Level |
|------------------------------|--------------|
| <a href="#">general/icmp</a> | Low          |
| <a href="#">general/tcp</a>  | Low          |

#### 2.1.1 Low [general/icmp](#)

|                                                                           |
|---------------------------------------------------------------------------|
| Low (CVSS: 2.1)                                                           |
| NVT: ICMP Timestamp Reply Information Disclosure                          |
| <b>Summary</b><br>The remote host responded to an ICMP timestamp request. |
| <b>Quality of Detection (QoD):</b> 80%                                    |
| ... continues on next page ...                                            |

...continued from previous page ...

**Vulnerability Detection Result**

The following response / ICMP packet has been received:

- ICMP Type: 14
- ICMP Code: 0

**Impact**

This information could theoretically be used to exploit weak time-based random number generators in other services.

**Solution:**

**Solution type:** Mitigation

Various mitigations are possible:

- Disable the support for ICMP timestamp on the remote host completely
- Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)

**Vulnerability Insight**

The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.

**Vulnerability Detection Method**

Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received.

Details: ICMP Timestamp Reply Information Disclosure

OID:1.3.6.1.4.1.25623.1.0.103190

Version used: 2025-01-21T05:37:33Z
